PAPER

**Please find below and/or attached an Office communication concerning this application or proceeding.**

The time period for reply, if any, is set in the attached communication.

<b>Office Action Summary</b>	<b>Application No.</b> 10/626,984	<b>Applicant(s)</b> KAWAI ET AL.	
	<b>Examiner</b> Leon J. Harper	<b>Art Unit</b> 2166	

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

### Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

### Status

- 1) ☒ Responsive to communication(s) filed on 08 March 2007.
- 2a) ☐ This action is **FINAL**.                      2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters; prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

### Disposition of Claims

- 4) ☒ Claim(s) 1-31, 35-44, 46-48, 52 and 53 is/are pending in the application.
- 4a) Of the above claim(s) \_\_\_\_\_ is/are withdrawn from consideration.
- 5) ☐ Claim(s) \_\_\_\_\_ is/are allowed.
- 6) ☒ Claim(s) 1-31, 35-44, 46-48, 52 and 53 is/are rejected.
- 7) ☐ Claim(s) \_\_\_\_\_ is/are objected to.
- 8) ☐ Claim(s) \_\_\_\_\_ are subject to restriction and/or election requirement.

### Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on \_\_\_\_\_ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.  
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).  
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

### Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All    b) ☐ Some \* c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
  2. ☐ Certified copies of the priority documents have been received in Application No. \_\_\_\_\_.
  3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

\* See the attached detailed Office action for a list of the certified copies not received.

### Attachment(s)

- |                                                                                                                                    |                                                                                         |

## **DETAILED ACTION**

### ***Continued Examination Under 37 CFR 1.114***

A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 3/8/2007 has been entered. Claims 1,7,9,15,17,18,35,52 and 53 have been amended. Accordingly, claims 1-31, 35-44, 46-48 52, and 53 are pending in this office action.

### ***Response to Arguments***

Applicant's arguments with respect to claims 1-31, 35-44, 46-48, 52 and 53 have been considered but are moot in view of the new ground(s) of rejection.

### ***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

The factual inquiries set forth in *Graham v. John Deere Co.*, 383 U.S. 1, 148

USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

Art Unit: 2166

1. Determining the scope and contents of the prior art.
2. Ascertaining the differences between the prior art and the claims at issue.
3. Resolving the level of ordinary skill in the pertinent art.
4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

Claims 1-23,28,29, 35-40, 52,53 are rejected under 35 U.S.C. 103(a) as being unpatentable over Wo 03060766 (hereinafter Lind) (art of record) in view of US 6560597 (hereinafter Dhill).

As for claim 1 Lind discloses: a scoring module determining a score which is assigned to at least one concept that has been extracted from a plurality of electronically-stored documents (See page 17 lines 20-24 note: definition of document corpus) wherein the score is based on at least one of a frequency of occurrence of the at least one concept within at least one such document, a concept weight, a structural weight, and a corpus weight; (See page 7 lines 20-24) a clustering module forming clusters of the documents by evaluating the score for the at least one concept of each document for a best fit to the clusters and assigning each document to the cluster with the best fit; and (See page 19 lines 4-10). While Lind does not differ substantially from the claimed invention the disclosure of a threshold module determining similarities between the documents grouped into each cluster based on the center of the cluster and the scores assigned to each of the at least one concepts in each document dynamically determining a threshold for each cluster as a function of the similarities, and identifying and reassigning those documents having the similarities falling outside the threshold are not necessarily explicit. Dhill however does disclose a threshold module determining

similarities between the documents grouped into each cluster based on the center of the cluster and the scores assigned to each of the at least one concepts in each document dynamically determining a threshold for each cluster as a function of the similarities (See column 3 lines 55-60 and column 5 line 55- column 6 line 5); and identifying and reassigning those documents having the similarities falling outside the threshold (See column 3 lines 60-65). It would have been obvious to an artisan of ordinary skill in the pertinent art at the time the invention was made to have incorporated the teaching of Dhill into the system of Lind. The modification would have been obvious because the two references are concerned with the solution to problem of efficient document scoring and clustering, therefore there is an implicit motivation to combine these references. In other words, the ordinary skilled artisan, during his/her quest for a solution to the cited problem, would look to the cited references at the time the invention was made. Consequently, the ordinary skilled artisan, would have been motivated to combine the cited references since Dhill's teaching would enable Lind's users to reclassify documents based on the center of the cluster..

As for claim 2 the rejection of claim 1 is incorporated, and further Lind discloses: the scoring module calculating the score as a function of a summation of at least one of the frequency of occurrence, the concept weight, the structural weight, and the corpus weight of the at least one concept (See Page 23 lines 1-4).

As for claim 3 the rejection of claim 2 is incorporated, and further Lind discloses: a compression module compressing the score through logarithmic compression (See page 17 line 30-34).

As for claim 4 the rejection of claim 1 is incorporated, and further Lind discloses: the scoring module calculating the concept weight as a function of a number of terms comprising the at least one concept (See page 21 lines 25-28).

As for claim 5 the rejection of claim 1 is incorporated, and further Lind discloses: the scoring module calculating the structural weight as a function of a location of the at least one concept within the at least one such document (See page 18 lines 10-14).

As for claim 6 the rejection of claim 1 is incorporated, and further Lind discloses: the scoring module calculating the corpus weight as a function of a reference count of the at least one concept over the plurality of documents (See page 18 lines 19- 21 note: this is an inverse weight of the reference count).

As for claim 7 the rejection of claim 1 is incorporated, and further Lind discloses: the scoring module forming the score assigned to the at least one concept to a normalized score vector for each such document, determining each such similarity between the normalized score vector for each such document as an inner product of

each normalized score vector, and applying the similarity to the best fit criterion (See page 30 line 30- page 31 line 1).

As for claim 8 the rejection of claim 1 is incorporated, and further Lind discloses: the clustering module evaluating a set of candidate seed documents selected from the plurality of documents, identifying a set of seed documents by applying the score for the at least one concept to a best fit criterion for each such candidate seed document, and basing the best fit criterion on the score of each such seed document (See page 28 line 8-16 note representative= seed).

Claims 9-16 are method claims corresponding to system claims 1-8 respectively, and are thus rejected for the reasons set forth in the rejection of claims 1-8.

Claim 17 is rejected for the same reasons as claim 9.

As for claim 18 Lind discloses: a scoring module scoring a document in an electronically-stored document set comprising: a frequency module determining a frequency of occurrence of at least one concept within a document (See page 18 lines 1-3); and a concept weight module analyzing a concept weight reflecting a specificity of meaning for the at least one concept within the document (See page 25 lines 27-30 note:  $rtc(t,c)$  is a value based on meaning); a structural weight module analyzing a structural weight reflecting a degree of significance based on structural location within

the document for the at least one concept (See page 18 lines 8-13), a corpus weight module analyzing a corpus weight inversely weighing a reference count of occurrences for the at least one concept within the document (See page 18 lines 19- 21 note: this is an inverse weight of the reference count); and a scoring evaluation module evaluating a score to be associated with the at least one concept as a function of the frequency, concept weight, structural weight, and corpus weight; (See page 21 24-27) While Lind does not differ substantially from the claimed invention the disclosure of a threshold module relocating outlier documents, comprising determining similarities between the documents groups into each cluster based on the center of the cluster and the scores assigned to each of the at least one concepts in each such document , dynamically determining a threshold for each cluster as a function oh the similarities, and identifying and reassigning the documents with the similarities falling outside the threshold are not necessarily explicit. Dhill however does disclose a threshold module determining similarities between the documents grouped into each cluster based on the center of the cluster and the scores assigned to each of the at least one concepts in each document dynamically determining a threshold for each cluster as a function of the similarities (See column 3 lines 55-60 and column 5 line 55- column 6 line 5); and identifying and reassigning those documents having the similarities falling outside the threshold (See column 3 lines 60-65).It would have been obvious to an artisan of ordinary skill in the pertinent at the time the invention was made to have incorporated the teaching of Dhill into the system of Lind.The modification would have been obvious because the two references are concerned with the solution to problem of efficient document scoring and

clustering, therefore there is an implicit motivation to combine these references. In other words, the ordinary skilled artisan, during his/her quest for a solution to the cited problem, would look to the cited references at the time the invention was made. Consequently, the ordinary skilled artisan, would have been motivated to combine the cited references since Dhill's teaching would enable Lind's users to reclassify documents based on the center of the cluster..

As for claim 19 the rejection of claim 18 is incorporated and further Lind discloses: the scoring module evaluating the score in accordance with the formula  $S_i = \sum f_{ij} \times c_{wij} \times s_{wij} \times r_{wij}$  where  $s_i$  comprises the score,  $f_{ij}$  comprises the frequency,  $0 < c_{wij} \leq 1$  comprises the concept weight,  $0 < s_{wij} \leq 1$  comprises the structural weight, and  $0 < r_{wij} \leq 1$  comprises the corpus weight for occurrence  $j$  of concept  $i$  (See page 23 lines 1-4).

As for claim 20, the rejection of claim 19 is incorporated and further Lindh discloses: the concept weight module evaluating the concept weight in accordance with the formula:

$$\begin{aligned} C_{wij} &= 0.25 + (0.25 \times t_{ij}), & 1 \leq t_{ij} \leq 3 \\ &0.25 + (0.25 \times [7 - t_{ij}]) & 4 \leq t_{ij} \leq 6 \\ &0.25, & t_{ij} \geq 7 \end{aligned} \quad (\text{See page 17 lines 30-34})$$

As for claim 21, the rejection of claim 19 is incorporated, and further Lindh discloses: the structural weight module evaluating the structural weight in accordance with the formula:

$$\begin{aligned} \text{Sw}_{ij} = & \quad 1.0, \quad \text{if } (J \approx \text{SUBJECT}) \\ & .8, \quad \text{if } (J \approx \text{HEADING}) \\ & .7, \quad \text{if } (J \approx \text{SUMMARY}) \\ & .5, \quad \text{if } (J \approx \text{BODY}) \\ & .1, \quad \text{if } (J \approx \text{SIGNATURE}) \end{aligned}$$

where  $\text{sw}_{ij}$  comprises the structural weight for occurrence  $j$  of each such concept  $I$  (See page 21 lines 25-29).

As for claim 22, the rejection of claim 19 is incorporated, and further Lindh discloses: the corpus weight module evaluating the corpus weight in accordance with the formula:

$$\text{Rw}_{ij} = \begin{cases} \frac{(T - r_{ij})^2}{T} & , \quad r_{ij} > M \\ 1.0 & r_{ij} \leq M \end{cases}$$

Where  $\text{rw}_{ij}$  comprises the corpus weight  $r_{ij}$  comprises a reference count for occurrence  $j$  of each such concept  $I$ ,  $T$  comprises a total number of reference counts of documents in the document set, and  $M$  comprises a maximum reference count of documents in the document set (See page 23 lines 20-23).

As for claim 23, the rejection of claim 19 is incorporated and further Lindh discloses: a compression module compressing the score in accordance with the formula  $S'I = \log(S_i + 1)$ , where  $S_i$  comprises the compressed score for each such concept  $I$  (See page 27 lines 1-7).

As for claim 28 the rejection of claim 18 is incorporated, and further Dhill discloses a plurality of candidate seed documents (See column 5 lines 35-42), a similarity module determining a similarity between each pair of a candidate seed document and a cluster center (See column 5 lines 55-60); a clustering module designating each such candidate seed document separated from substantially all cluster centers with such similarity being sufficiently distinct as a seed document, and grouping each such candidate seed document not being sufficiently distinct into a cluster with a nearest cluster center (See column 3 lines 60-65). It would have been obvious to an artisan of ordinary skill in the pertinent art at the time the invention was made to have incorporated the teaching of Dhill into the system of Lind. The modification would have been obvious because the two references are concerned with the solution to problem of efficient document scoring and clustering, therefore there is an implicit motivation to combine these references. In other words, the ordinary skilled artisan, during his/her quest for a solution to the cited problem, would look to the cited references at the time the invention was made. Consequently, the ordinary skilled artisan, would have been

motivated to combine the cited references since Dhill's teaching would enable Lind's users to reclassify documents based on the center of the cluster..

As for claim 29 the rejection of claim 28 is incorporated, and further Dhill discloses: a plurality of candidate seed documents; a similarity module determining a similarity between each pair of a candidate seed document and a cluster center; a clustering module designating each such candidate seed document separated from substantially all cluster centers with such similarity being sufficiently distinct as a seed document, and grouping each such candidate set document not being sufficiently distinct into a cluster with a nearest cluster center(See column 6 lines 25-40).

Claims 35-40 are method claims comprising substantially the same limitation as system claims 18-23, and are thus rejected for the reasons set forth in the rejection of claims 18-23.

Claims 46 is a method claims corresponding to system claim 29 and is thus rejected for the same reason as set forth in the rejection of claim 29.

Claim 52 is rejected for substantially the same reasons as claim 35,.

Claim 53 is an apparatus claim corresponding to method claim 18 and is thus rejected for the same reasons as claim 18.

Claims 24-27 and 41-44 and claims is rejected under 35 U.S.C. 103(a) as being unpatentable over Lind and Dhill as applied to claim 18 and 35 above, and further in view of US 6675159 (hereinafter Klein) (art of record)

As for claim 24 the rejection of claim 18 is incorporated, and further Klein discloses: a global stop concept vector cache maintaining concepts and terms (See column 18 lines 17-20 and See column 14 lines 45-49); and a filtering module filtering selection of the at least one concept based on the concepts and terms maintained in the global stop concept vector cache (See column 14 lines 45-50). It would have been obvious to an artisan of ordinary skill in the pertinent art at the time of the invention to have incorporated the teachings of Klein into the system of Lind. The modification would have been obvious because queries and documents are linked in the fact that words are the entities that are being processed. Therefore, any transformation capable of being made to a query should be able to applied to documents too, this makes all document management systems more efficient and easier to maintain.

As for claim 25 the rejection of claim 18 is incorporated, and further Klein discloses: a parsing module identifying terms within at least one document in the

document set, and combining the identified terms into one or more of the concepts (See column 2 lines 53-56).

As for claim 26 the rejection of claim 25 is incorporated, and further Klein discloses: the parsing module structuring each such identified term in the one or more concepts into canonical concepts comprising at least one of word root, character case, and word ordering (See column 14 lines 63-67).

As for claim 27 the rejection of claim 25 is incorporated, and further Klein discloses wherein at least one of nouns, proper nouns and adjectives are included as

Claims 41-44, are method claims corresponding to system claims 24-27, respectively and are thus rejected for the same reasons as set forth in the rejection of claims 24-27,.

Claims 30,31,47 and 48 are rejected under 35 U.S.C. 103(a) as being unpatentable over Lind and Dhill as applied to claim 29 above, and further in view of Klein.

As for claim 30 the rejection of claim 29 is incorporated, and further Klein discloses: a normalized score vector for each document comprising the score

Art Unit: 2166

associated with the at least one concept for each such concept occurring within the document (See column 3 lines 18-21); and the similarity module determining the similarity as a function of the normalized score vector associated with the at least one concept for each such document (See column 18 lines 23-26).

As for claim 31, the rejection of claim 30 is incorporated, and further Klein discloses: the similarity module calculating the similarity in accordance with the formula

$$\cos \theta_{ab} = \frac{(S_s \cdot S_b)}{S_a S_b}$$

Where  $\cos \theta_{ab}$  comprises a similarity between a document A and a document B,  $S_a$  comprises a score vector for document A and  $S_b$  comprises a score vector for document B.

Claims 47 and 48 are method claims corresponding to the system of claims 30 and 31 respectively and are thus rejected for the same reasons as set forth in the rejection of claim 30.

### Information

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Leon J. Harper whose telephone number is 571-272-0759. The examiner can normally be reached on 7:30AM - 4:00PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Hosain T. Alam can be reached on 571-272-3978. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
